# INNOVATIVE FEED PRODUCT FOR FARM ANIMALS AND POULTRY.

# CBFeed

## REDUCING THE COST OF COMPOUND FEED WHILE RETAINING NUTRITIONAL VALUE

In the production of animal feed, CBFeed feed additive is added on top of the main diet without changing the main recipe or with a decrease in an even amount of organic ingredients in the animal feed, such as wheat, soybean meal, corn, etc.

It is used in the following proportions for the listed farm animals and birds, at which the best palatability and digestibility is achieved.

CBFeed helps to assimilate the main feed, and also normalizes its physical and chemical composition.

 BROILERS	up to <b>5%</b>
	up to <b>5%</b>
 LAYERS	
 CATTLE	up to <b>10%</b>
	up to <b>10%</b>
 CAIRY COWS	
 SHEEP	up to <b>10%</b>
	up to <b>10%</b>
 TURKEY	

\*CBFeed can replace up to 50% of the compound feed composition, tests on farm animals and birds have proven the safety of such a substitution.

Manufactured according to our patented technology from rice waste, which was previously impossible to use in feed.

# CBFeed

## FEATURES OF POSITIVE IMPACT ON ANIMALS AND POULTRY

**The presence of a special patented fungicide enzyme-derived chemicals used in CBFeed:**

participates in the breakdown of cellulose-rich feed into rapidly digestible carbohydrates (glucose, etc.).

**Due to the fact that CBFeed is an enzymatically active product,** it helps to assimilate more valuable substances in the feed.

**The presence of bacteria belonging to the genus Bacillus (hay bacillus and others) in CBFeed:** produces amylolytic enzymes that break down oligosaccharides (starch, etc.) in grains and carbohydrate-rich foods, as well as proteolytic enzymes that break down carbohydrate-rich substances into rapidly digestible amino acids.

**At the same time, it exhibits antagonistic properties** against opportunistic and pathogenic microorganisms of the gastrointestinal tract of animals and birds, that is, it prevents infection with them and prevents their development.

**The micro-organisms in CBFeed have probiotic properties** that are beneficial to the gastrointestinal tract of animals and poultry, i.e. they ensure the normal functioning of the gastrointestinal system.

**It has been tested by authorities in Uzbekistan and Japan** according to all standards, it is safe for animals and the environment.

---

**CBFeed, being a cheap and at the same time effective product, can significantly reduce the cost of feed for all types of farm animals and poultry.**
